DBMS PROJECT

ELECTRONIC COMPANY DATA BASE:

Designed By:

Name : Sameer Kumar

Roll – 21EEB0B54

Branch-Electrical and electronics engineering

INTRODUCTION:

The **electronics industry** emerged in the 20th century and is today one of the largest global industries. Contemporary society uses a vast array of electronic devices built in automated or semi-automated factories operated by the industry.

NEED OF DATA BASE FOR ELECTRONIC DATA BASE:

Electronic companies play an important role in our day to day life and they sell and produce large numbers of products everyday to various customers and Distributors and to store this information simple file system is not efficient so Data Base is used to Store and retrieve information whenever required. The background of this project is to provide an easy and efficient database that stores the information of customers and products and how they are related to each other etc. The employee has his details stored and other details such as his department ,contact number and salary etc. The customer has his details stored and his premise and meters and equipment he has in the premise are stored and based on his consumption billing is generated.

Assumptions:

This company produces vast variety of products from Headphones to laptop .

ENTITIES AND RELATIONSHIPS: -

1) DEPARTMENT:

This entity stores the info of employees with their respective departments

- Dept_id : Stores department Ids of the company
- Dept_Name : Stores Department name

2) Employee:

This entity stores the info of employees .

- Emp_id : Gives ID of the Employee
- Name: Employee's Name
- Address : Employee's city
- Salary: Employee's Salary
- DOJ: Date of joining of the Employee

3) Retailer:

This entity stores the information of the Retailer. Retailer acts as Direct link between Distributor and Customer .

- Reatiler_id : Retailer's id
- Addrs : Address of the Retailer
- Retailer_Name: Name of the Retailer
- Cell No: Retailer's Contact Number

4)Customer:

This entity stores basic information of the customer like date of purchase, product's details and retailer's details.

- Customer_id: Customer's id
- Customer_Name: Customer's Name
- Transaction_id : Customer's Transaction details
- DOP: date of purchase
- Phone_no: Customers Contact details
- Area: locality of customer
- City: Customer's city
- Pincode: Zip code

5)Product:

This entity stores product details

- Product_id : unique id given to the Product
- Warranty : Warranty of the product in years
- Price: Price of the product
- Type_of_device: Type of product like laptop,headphone etc.
- Quantiy: quantity of the products
- Model name: Model name of the specific device

6)Product_Review:

This entity stores the review given by the customer for the product.

- Response : Response of the customer
- Rating : Rating given by the customer for the product out of five.

7)<u>Distributor:</u>

This entity stores the information of the Distributor . Distributor is one who buys products from the company in bulk and sells to different retailers

- Distributor_id:Unique Id of the Distributor
- Purchase_id: Unique id given by company to Distributor at the time of purchase.
- Quantiy: Quantity of the products
- Device_price: the lowered price at which distributor buys from company
- Purchase_price: total price i.e Quantity multiplied by Device_price **8)<u>Complaints:</u>**

This entity stores the complaints given by cutomers .

- Complaint_id: Unique ID given by Company to the complaints
- Product_id: Id of the product
- Problem: Problem of the Customer
- Emp_id: Id of employee who receives the complaint

<u>9)Contacts:</u> Because mobile number is an multi-valued attribute this table is created to store the phone numbers of the employees

- Emp_id: Id of the Employee

- Contact_number: Phone number of the Employee.

10) Distributed_to:

Because of M to N relationship between Product and Distributor this table is created

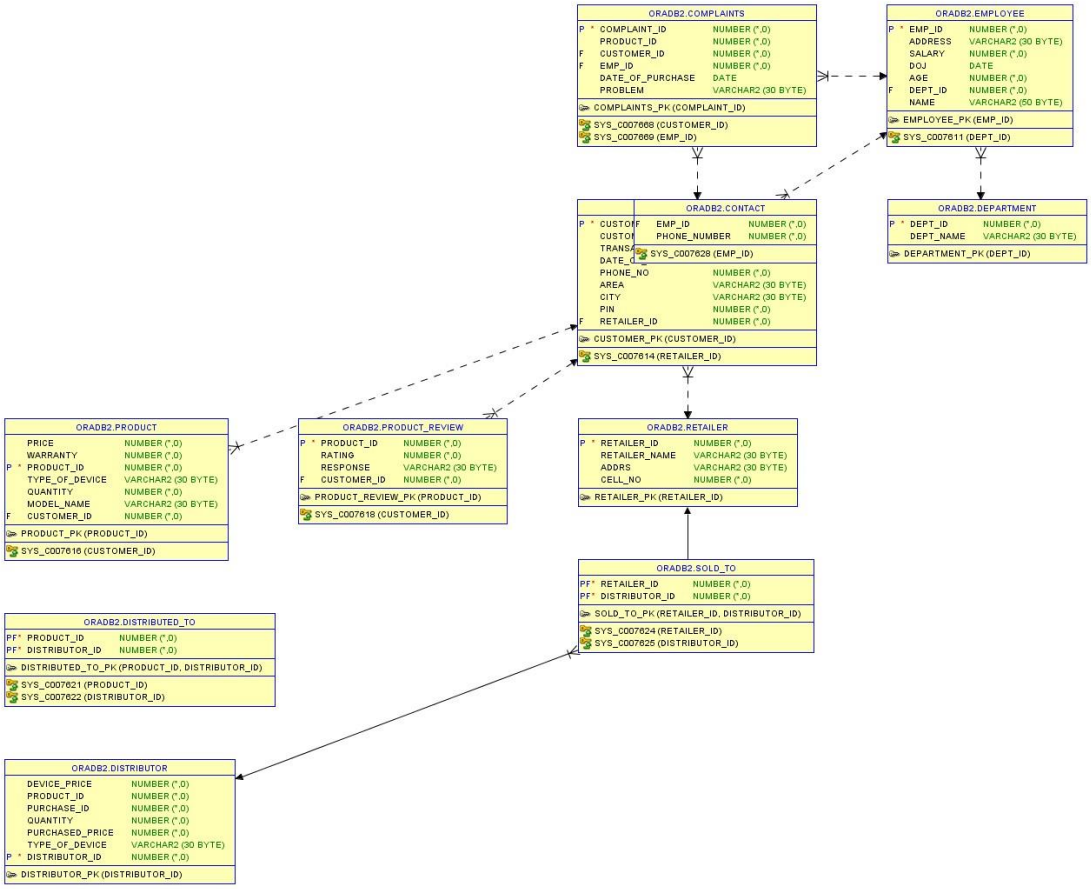
- Product_id : Id of the Product
- Distributor_id: Distributor's Id

11)Sold_to:

Because of M to N relationship between Distributor and Retailer this table is created

- Distributor_id: Distributor's Id
- Retailer_id : Retailer's Id

ER Diagram(Relational Schema):



Creation Of Tables:

1.

SOME EXAMPLE QUERIES PERFROMED ON THE DATABASE:

1)TO FIND NAMES OF CUSTOMERS FROM CHENNAI.

QUERY:

select Customer_name from Customer where City='chennai';

OUTPUT:

	CUSTOMER_NAME
1	ravi
2	Sashi

2)TO FIND DEVICE PRICE AND IDS OF DISTRIBUTOR WHO DISTRIBUTE LAPTOPS:

QUERY:

select Device_price,Distributor_id from Distributor where Type_of_device='Laptop'; OUTPUT:

	DEVICE_PRICE	DISTRIBUTOR_ID
1	90000	80001
2	95000	80002
3	55000	80010
4	75000	80012
5	95000	80013
6	90000	80014

3)FIND OUT CUSTOMER NAMES WHO HAVE BATTERY PROBLEMS:

QUERY:

```
SELECT C.CUSTOMER_NAME FROM CUSTOMER
C,COMPLAINTS CP WHERE WHERE
C.CUSTOMER_ID=CP.CUSTOMER_ID AND
CP.PROBLEM='BATTERY PROBLEM';
```

	CUSTOMER_NAME
1	Sreesanth
2	Saaho

4) SELECT NAMES OF EMPLOYEES WHO WORK IN RESEARCH AND DEVELOPMENT DEPARTMENT: QUERY:

```
SELECT E.NAME FROM EMPLOYEE E,DEPARTMENT D
WHERE E.DEPT_ID=D.DEPT_ID AND DEPT_NAME='R AND D';
```

	NAME
1	Kishore
2	Mahi

5) PRINT RETAILERS WHO ARE FROM HYDERABAD:

QUERY:

```
Select distinct(R.retailer_name) from Distributor D,Product
P,Retailer R,sold_to S
where S.Retailer_id=R.Retailer_id and
D.Product_id=p.product_id  and r.addrs='Hyderabad'; OUTPUT:
```

	RETAILER_NAME
1	Rama Roa
2	laxmi ltd

Conclusion:-

We have built a fully functional Data base management model of an electronic company which stores information related to their employees, products, ditsributors, retailers and cutomers.
